

All-in-one Solution for  
**Delivery and  
Logistics Tracking**

**Book a Demo**

Logicapture™ manages the tracking the delivery of goods from source to recipient by focusing on the submission of various documents as goods are being shipped to various destinations.

Logicapture™ consists of a document scanning background service that scans and uploads the PODs (Proof of Delivery) directly from the scanners as well as a backend administrator where all the data and documents flows and is checked and approved.

## Key Features

### 1. Real-Time Document Management

The system enables instant upload and access to proof of delivery documents, ensuring faster processing and reducing delays caused by manual submission or paperwork.

### 2. Transparency & Accountability

By requiring drivers to upload proof of delivery, the system creates a transparent trail of transactions. This helps reduce disputes, track delivery statuses, and improve accountability among transporters.

### 3. Cost and Time Efficiency

Digital document submission reduces the need for physical paperwork, saving costs on printing, storage, and transportation. It also eliminates time-consuming manual processes, speeding up workflows.

### 4. Improved Customer Satisfaction

With instant access to proof of delivery, customers can verify completed deliveries quickly. These fosters trust and enhance the customer experience by providing timely updates and reducing uncertainty.

### 5. Analytics and Reporting

The system can collect and store delivery data, which can be analyzed to optimize operations, track delivery performance, and identify bottlenecks, contributing to improved decision-making.

## How Logicapture™ Works

#### 1. Trip Initiated

Logistics department creates a trip by assigning a transporter, source warehouse, destination, trip type and other details.

#### 2. Driver Assigned

The transporter is notified and then assigns the trip to a particular driver and truck for order fulfilling.

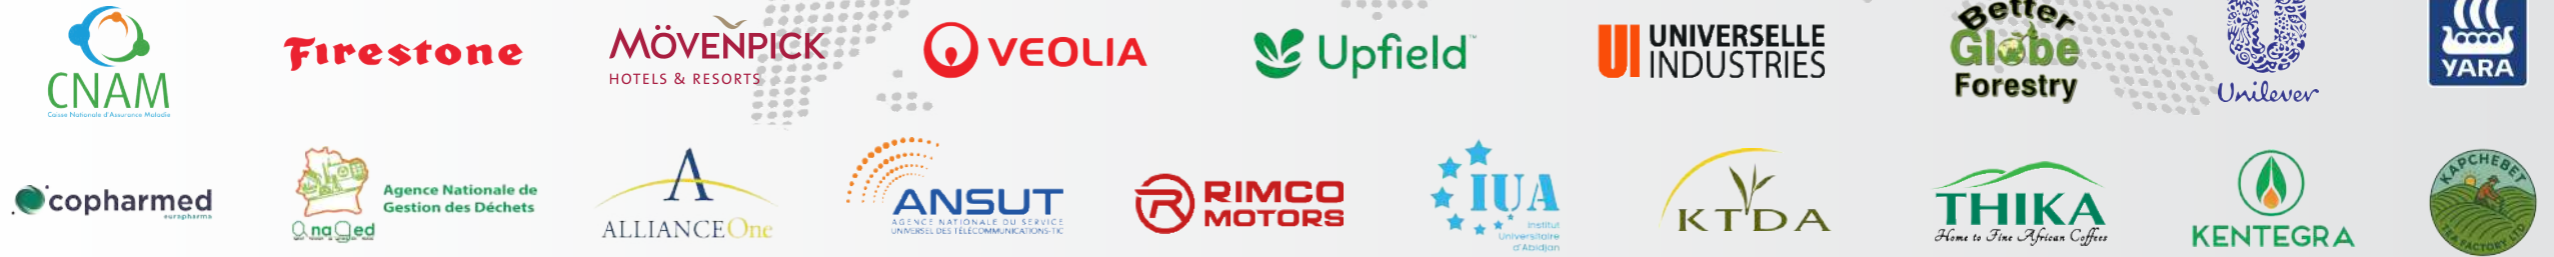

#### 3. Trip Fulfilled

The driver delivers the goods to the customer where they are received, and documents stamped and uploaded as a proof of delivery.

#### 4. Trip closure

After all the documents have been uploaded, the logistics team verifies and closes the trip.
